"New Nature" Invention Mind Drawing

Using the elements of color, line and shape – both geometric and organic – create your own Invention Drawing plus "new" species of plant. Look for inspiration in geometric growth patterns, in the geometric and organic shapes that you can see while on an exciting field-camp adventure for new color and through shape and pattern.

Art Materials:

White paper, crayons, colored pencils, colored markers, recycled or patterned paper, glue sticks, scissors and geometric shape stencils (optional).

Guidelines:

2000 Draw a single "invented" tree-like looking plant in a single plant or part of a plant like a root, trunk or a sprout portion of a plant. You can also place the entire single plant still on the paper and trace it onto another or your page. Look for "growth patterns" in the organic and geometric shapes contained in the shape of the ball or the center of these forms.

201001 and 2010400 Considered geometric colorful shapes and patterns. Collage and glue from onto your "invented" plant species drawing.

2010000 Consider adding more drawings of invented plants to the rest of your page, making several variations of your "invented plant species" for greater variety. Roll your paper in half and making into a booklet and frames the shapes your invented flower species on the cover.
